It's . This is a hentai-ish upload of a picture I made awhile back. Here are the main things about it:It's about a perverted MALE to female size relationship.I don't know if this is canon to the wiki. The wiki is really confusing to me so I don't know if this is right.This isn't Ayu's perverted backside. This is my son's butt.It doesn't have any backside events. And this is by no means a finished picture or is it done so I'm not gonna be posting anything for awhile. That is what I have in mind for it.If you do want to try to make it better, go ahead!I would really appreciate it if you posted it back here to show your work to everyone. Also if you have time to add more details, add them! I want the most accurate version possible. Anyways, I hope you like it, and if not, that's cool. Enjoy! With the development of the chemical industry and the emergence of the electronic industry, research in the field of microelectronics has been widely carried out to improve the reliability and to reduce the size of various electronic devices. In particular, research in the field of printed circuit boards has focused on the development of a highly reliable circuit board that is prepared with a smaller number of steps and a lower production cost. In this connection, research has been carried out to reduce the size of printed circuit boards, which are widely used as a means for electrically connecting electronic devices to one another, in order to further reduce the manufacturing cost of the electronic device. However, when a method for reducing the size of the printed circuit board is applied to the manufacturing process of the printed circuit board, the electrical properties and reliability of the printed circuit board, such as the electrical properties of the printed circuit board itself, the adhesive property of the printed circuit board to a copper layer of a printed circuit board, etc., deteriorate, thereby increasing the risk of defects and errors occurring during the manufacturing process. In particular, when the size of a printed circuit board is reduced, the amount of adhesion between the printed circuit board and a copper layer, which is an electrode layer, and the substrate becomes smaller. As a result, it is difficult to sufficiently 82157476af
